Subject: report-in-progress

Was asked to write this up for Oversight last week, keep forgetting to pass it on to you.

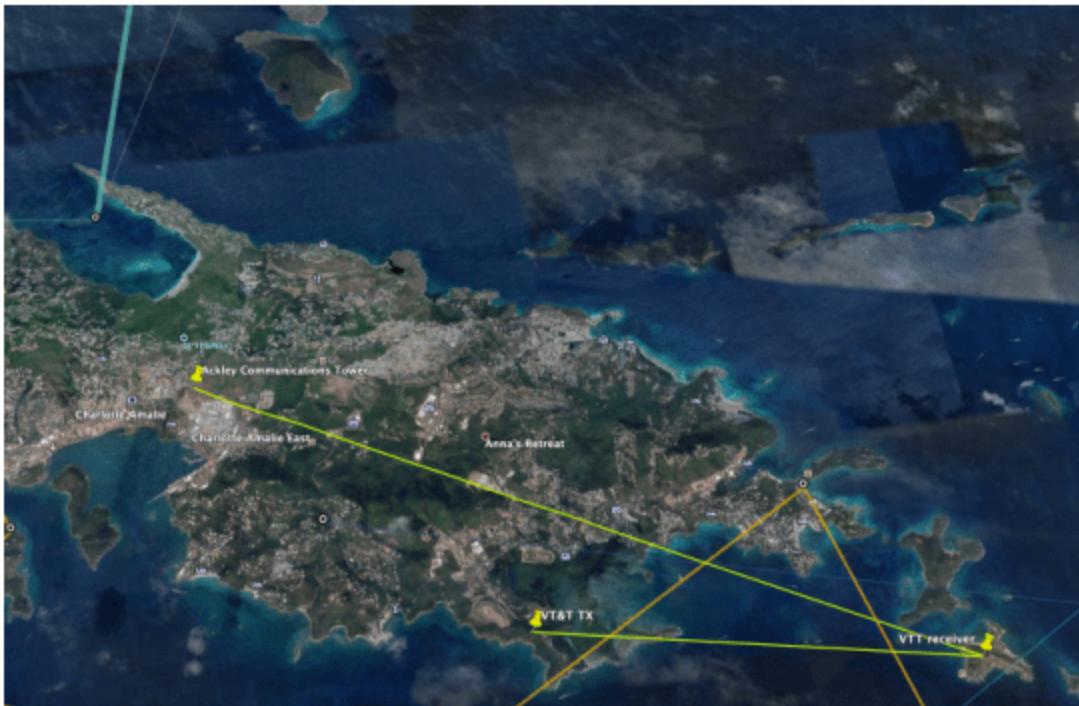

I'm sure y'all know more about the bulk of it than I do, but if the hypothesis I pose is correct, should any discussion of Corals/Symbiodinium/Algae/Dinoflagellates arise linked to data encryption or Saudi Arabia, I might be able to fill in some gaps - dates, and other individuals who could have been involved in preventing funding from being provided to those whose interest in symbiosis was based solely on scientific merit.

It also includes a potential route for Epstein to have encountered James Damore and Kevin Cernekee, agent provocateurs who infiltrated google and were believed to have been involved in the promotion of the Pizzagate narrative and the harassment and threats made against [REDACTED]

I also have additional info on Epstein's custom microwave communications setup that I obtained after the first draft of this document. I believe that one of the reasons for the Epstein/Trump spat over the 515 County Road, Palm Beach property that was eventually sold to Ryobolev might be over its proximity to the Columbus-IIb fiber trunk line.

Compare Epstein's proximity to both Columbus II-b and the USVI circuit below.

Unfortunately, I also have reason to believe - [given statements made by Ethan Zuckerman of the MIT Media Lab](#) - that the Little Bits engineering kits that were largely targeted at pre-teen girls - were funded at least in part by Epstein in connection with [Neoteny Labs](#). The individual I discussed before claimed to be 'besties' with [REDACTED] [REDACTED] it appears they received funding in 2011, when she was affiliated with JE. Of course, that's not a crime, per se, but I think there's something worth looking at, in the event any data about usage or users of the kits might have been acquired by Epstein et al in his efforts to screen potential members to join his 'herd' at the ranch.

Also, I offered to put you in touch with her, but she didn't seem to express interest. Shortly thereafter, the article about the ranch broke, and I asked this.

tributing sperm to it. The repository discontinued operations in 1999.)

Mr. Lanier, the virtual-reality creator and author, said he had the impression that Mr. Epstein was using the dinner parties — where some guests were attractive women with impressive academic credentials — to screen candidates to bear Mr. Epstein's children.

Mr. Epstein made no secret of his interest in tinkering with genes — and in perpetuating his own DNA.

my god, is THAT what you meant by 'girls'?

JUL 31 3:09 PM

He never mentioned that to me

JUL 31 9:31 PM

At this point, I really can't tell who her actions are intended to benefit. We haven't spoken since his death.

Also, it appears the [REDACTED] case has recently been delisted on both the Waterbury PD and NCMEC sites? I hope that indicates good news to come soon.

Again, I have lots more information where these things come from. Just recovered my old conversation archives, digging through them to see if there's anything of relevance there.

Please ask if there's anything you'd like me to elaborate on (or stay away from).

regards,

[REDACTED]

p.s. Hope y'all got a chance to pick up that desktop computer that got left behind in the beach cabana on the island (I think it was on the north-east side, near the lifeguard stand?).
